

Bevier Hall Renovation - SUNY New Paltz

New Paltz, New York

Bevier Hall is the third of five existing, 210-bed residence halls on the Hasbrouck Quad at SUNY New Paltz to be renovated by architecture+. The \$16.1 million renovation continues in the same design style as its sibling residence halls Crispell and LeFevre.

While utilizing the architectural principals established for the other Hasbrouck renovations, Bevier Hall has unique exterior design elements and new interior design to establish its own identity. To facilitate the challenge of the seven month construction duration, this project was bid early to allow for a six month pre-construction period to afford the contractor time to complete submittals and plan for the quick construction pace required for this renovation.

The project was designed and produced in BIM. Construction is scheduled to be complete in August of 2017. This project is being design for LEED Gold certification.
