

Clifton Park-Halfmoon Fire Department

Clifton Park, New York

This new 17,000 square foot fire station provides a drive-through apparatus bay with room for eight trucks, district offices, a community room, and a commercial kitchen. The masonry exterior is accented by two red glazed brick towers that house the control room and the hose drying operations.

It replaces an outmoded facility on the same site that could not accommodate the station's contemporary equipment. We developed a plan for phased construction so that the existing station could remain in service during the construction of the new facility.
